Rust Protection

Anti-corrosive primer

Introducing a new way of protecting bathroom and design units against corrosion. Anticorrosive primer technology guarantees higher resistance to humidity.

We supply radiators with an anti-corrosion layer in color tones according to the ISAN color palette. This is done in the design for connection to the heating system, as an electric radiator, but also for combined heating. Mounting elements are supplied in plastic, zinc or galvanized finish.

in the bathroom

next to the shower

in the washroom

Leak-proof and surface finish guarantee as per applicable business and warranty conditions. For products located within reach of splashing water, the warranty is 2 years. The warranty does not apply to units installed in aggressive environments or exposed to highly corrosive substances (ammonia, chlorine, cleaning agents, soap-based substances, etc.).
